

My name is Stephen Harris, I am a design lead and creative human.

swerve@cardboardrobotcreative.com 0421047089

A Recent History

In my current role as Design Lead at Southern Cross University for the past four years, I have successfully led the development of the university's design narrative and established a consistent and recognizable brand that encompasses all digital, internal and external touch points. Prior to this, I worked as a Design Lead for Spectrum Group/Ovato and Senior Designer at Ogilvy, where I played a crucial role in developing the design narrative of these businesses.

Before venturing into the advertising and marketing industry, I served as a design academic at both UNSAAWD and UTS, and also worked as a casual art director for several magazines. Concurrently, I run my own business, building digital and web solutions for small to medium-sized businesses and creators, while also pursuing my passion for fine arts, including painting and digital creation. My previous experience also includes work in publishing and digital builds, see next page for details.

Additionally, I am an avid musician and play in musical projects. I'm also a Justice of the Peace and a board member of the Lismore regional art gallery, where I actively contribute to the local community.

My diverse range of experiences in design, academia, entrepreneurship, and community involvement, combined with my passion for the arts, make me a valuable asset to any organization looking for a creative and versatile team member.

Experience

🋂 Southern Cross University - Design Lead May 2019 - Present

- Leading the design conversation about public perception of the institution.
- Formulated the revised brand position creative to be more impactful, inclusive and simpler to use.
- Built a team that could produce award winning physical, digital and immersive experiences.
- Led and managed creative strategy, digital and brand design and technology on many projects.
- Collaborated with cross-functional teams and external agencies for the delivery of digital and creative projects.
- Developed agile solutions in response to changes in environment or circumstance.

Ovato / Spectrum - Design Lead May 2016 - May 2019

- Led the rebrand of the umbrella brand Ovato, encompassing 20+ sub brands and acquisitions.
- Agency Design Lead: Led the conception, pitching, and completion of design, web, and motion deliverables for all clients.
- Helped build small retainer clients into larger propositions by adapting human centred and design thinking methodologies.
- Improved creative assets, which led to increased traffic on all digital channels with the development of new creative strategy.
- Collaborated with other agencies in the group and freelancers

Oqily Senior Designer Jan 2014 - Jan 2019

- Senior designer.
- Utilised a full suite of creative tools for motion, digital, web and print outputs.
- Design thinking & concept development.
- Design systems, digital builds and integration.

UTS: University of Technology - Casual Academic Feb 2015 - Jul 2016

- Face to face tutoring and lecturing design and design thinking
- Wrote coursework including UX and UI cross discipline modules
- Tutored and lectured conceptual design modules

UNSW Casual academic 2009 - Nov 2015

- Tutored and lectured in design and media arts
- Wrote design coursework based on previous industry experience

Nardboard Robot Creative - CCO (owner)

- Jan 2014 now
- UX and behavioural design
- UI and front end design,
- brand and identity, design and consultancy

Whitehouse institute of design - Casual Academic Aug 2012 - Oct 2015

Device Technologies Freelance designer Jun 2014 - Sep 2014

The Electric Canvas · Freelance Artist (projection mapping) Jun 2014 - Aug 2014

Horwitz Publications Art director Oct 2009 - Jan 2014

Dual plover - CCO (Owner) Jan 1996 - Oct 2014

AD+INC - Freelance Designer Jan 2009 - Oct 2009

HWI Electrical Freelance Designer Jun 2008 - Jul 2008

Pacific Magazines - Finished artist Jan 1998 - Apr 2003

Hannanprint-Finished artist Oct 1997 - Jan 1998

Text media - Finished artist Jun 1996 - Apr 1997

News Corp - finished artist 1991 - 1996

Design Process Development

I use design thinking to consider how design is implemented in any new role so a constant feedback cycle is established to produce outcomes that resonate with both the audience and the client.

The example below is the design life cycle I developed for the spectrum group (Now Ovato / SBM), I used this to show clients options on design inputs and outputs into the campaign, account or digital product. I've built other similiar design lifecycles at my current role and at Ogilvy which have both helped to unify the team and give the client peace of mind that we are working together for the best possible outcome.

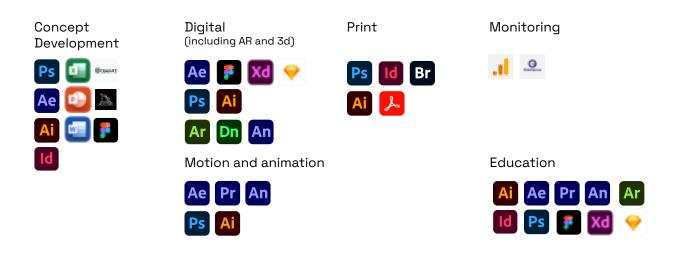

Design Skill set

As a design professional, I prioritise a human-centric approach and believe in utilising an agnostic design methodology. My experience as a design academic at prestigious institutions such as UNSW and UTS has equipped me with the skills to effectively communicate design tools, their usage, and best practices. This experience has allowed me to identify overlaps within applications and consider multiple and modal outputs.

I believe in empowering my team to leverage any tool to achieve the best possible outcomes and to add value to the original concept. Additionally, I apply this same approach to my own design practice. My skillset spans pragmatic digital and design skills, as well as academic and conceptual models and systems.

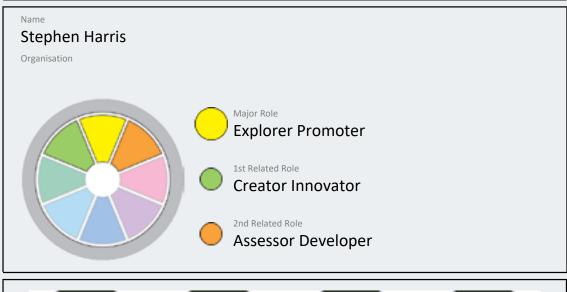

In my work, I frequently employ various creative problem-solving tools to deliver outstanding results. I prioritize collaboration and teamwork to produce high-quality creative work. In addition to my problem-solving tools, I have hands-on experience working with a range of content management systems, such as Kentico, T4, WordPress, Joomla, and more. I also possess basic front-end HTML, JS. and CSS skills.

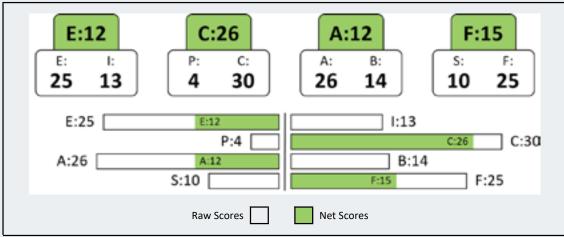

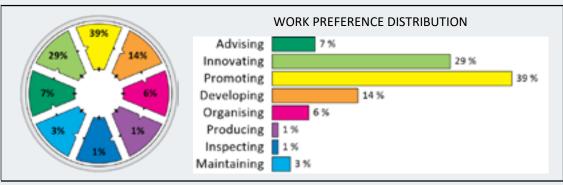

Margerison-McCann model summary of my management of teams

I feel this reflects my belief that people can do amazing things with the right guidance and resources.

Transforming Tomorrow Brand Reposition

I had the opportunity to lead a brand repositioning project for Southern Cross University. The existing brand was rigid and did not allow for tailored experiences to specific audiences. To address this, the CMO conducted market research and internal dialogue, which I was fortunate enough to be part of, to gather insights from internal and external audiences. We used these insights to enrich and add flexibility to the university's external and internal communications through a much clearer and concise brand position.

The brief for this project was to reposition the existing brand without changing the master brand lockup across all campuses and associated digital properties. As the lead on this project, I started by working closely with the existing brand and putting together a rough brief and direction. I introduced a new colour palette by building and deepening the existing brand colours. To address problems we were having with the existing master brand mark, I created another more compact version of the logo. I also made sure to keep the new brand inclusive and flexible to meet the needs of all users, while emphasizing that this was just one step in the evolution of the brand.

For the launch, I led my team designing a brand identity guide, landing pages, single pages, out-of-home (OOH) advertising such as buses, trams, billboards, and bus shelters, and social media assets. We also created an 84-page magazine that went out to every student, staff member, and alumnus of the university. This repositioned brand is now embedded in all internal and external communications and has led to a record 18% year-over-year increase in student enrollment.

Overall, this was an exciting project that required a deep understanding of the brand's audience and the ability to create a more inclusive and flexible brand identity. I'm proud to have led this project, and I believe the results speak to its success.

Lismore Wayfinding project

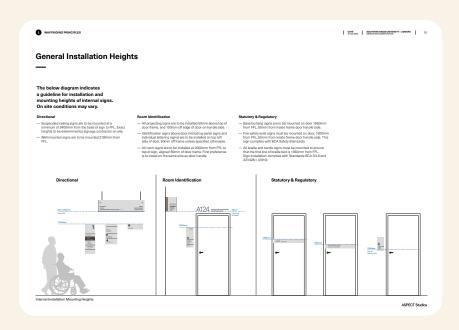

During my time working on the Lismore Wayfinding project, I quickly realized that the existing campus signage and wayfinding system was no longer fit for purpose. It was a challenge to navigate the mixture of old and outdated signage, lack of clear sightlines for signage, and a general inability for people to find their way around the large campus.

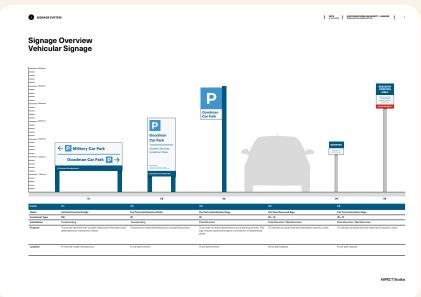

Recognizing the need for a new, unified signage system that would provide clear and legible information to all users and enable equitable access to destinations throughout the campus, I presented a proposal to the executive in charge of the portfolio. Instead of relying on expensive quotes and proposals from previous vendors, I was given the opportunity to find specialist wayfinding agencies and select the best solution for our needs.

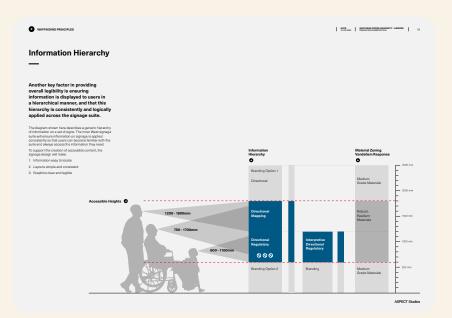

Together with other portfolios and providers, we assessed the limitations of the campus and determined the best locations for signage and the necessary capital works and personnel. From there, I selected an agency from a group of three to tender for the job.

The resulting wayfinding system not only allowed for the installation of key sign types as required, but also included fabrication and tender guidelines for external contractors who would create the signage. Additionally, the system outlined the appropriate size, scale, and proportion of each type of signage to ensure consistency across the campus. Through this process, we were able to provide a comprehensive solution to the wayfinding challenges at Lismore Campus without breaking the bank.

This was an important project as trust and general perception of the institution is established as soon as a potential student, academic or staff member first interacts with the site.

The Electric Kombi

I had the opportunity to witness the transformation of an old, broken-down kombi into a cutting-edge electric vehicle powered by a Tesla drive train. This revolutionary conversion was the brainchild of our CMO, who tapped into the expertise of Southern Cross Alumni. I recognized the potential to contribute something truly remarkable and took on the challenge with enthusiasm.

As the project progressed, my first task was to conceptualize graphics that would complement the vehicle's new identity, inspired by its origins in the subtropical region. With stakeholder approval, my team and I brought these concepts to life using 3D rendering. Once the kombi was reskinned, we took it on a photo shoot and utilized our university's CMS to create a microsite. This site included a learning unit tailored to secondary school students, making it accessible to anyone interested in the project.

Additionally, we developed signage and social media content to promote the project, and the kombi is still being utilized at career expos and in advertisements as an example of what our university's students and alumni are capable of achieving. Overall, my contribution to this project allowed me to showcase my creativity and collaborate with an exceptional team to achieve a truly impactful outcome.

No more landfill for Partnerships and Alumni Merchandise

I collaborated with the partnerships and activations teams to revamp our approach to merchandise offerings by emphasizing the importance of sustainability. We prioritized sourcing materials that were eco-friendly, taking into account the production process and the lifecycle of the items. As a result, we phased out the procurement of single-use plastics and instead opted for more environmentally conscious products, such as rice husk reusable coffee cups and BPA-free polypropylene, and wheat straw bioplastic pens that were 100% recyclable and renewable. By adopting such practices, we were able to position the University as a thought leader in the pursuit of sustainable alternatives.

Digital Experience Project

The digital Experience Project was to modernise and stream line all of our outward facing marketing automation. I advised external agencies on creative for a new build of our website, new templates for EDM communications and maintaining consistency with the new brand. It is a massive project but will help continue the upward trajectory of the universities enrolment numbers and general public perception.

Fleet and Vehicle wrapping

Because there's nothing better than seeing your work on the side of a bus or car. I had the opportunity to wrap buses, trams, cars and vans due to the fact there is not much in the way of advertising opportunities out of home in the northern rivers.

Digital Asset and Brand Manager

I scoped, tendered and implemented frontify as our brand management platform, replacing what was our photolibrary CMS and templating platform outfit. This enabling people throughout the university to implement and standardise design for their projects as well as saving \$40k a year on platform duplication.

Building a Team Capable of Anything

I built a team that could handle any digital, motion, print or social design brief that came into the studio. This was in stark contrast to when I started and the people I had could only produce pdf's for print.

The Past:

Dvato and Ogilvy

2009 - 2019

Ovato Rebrand

As part of the re-branding efforts for Ovato, which combined the PMP and IPMG print and digital groups and a suite of smaller digital and marketing groups including Spectrum, my role as Chief Custodian of the brand was to oversee the creation of assets that aligned with the new programmatic print and customer-centric direction.

From the beginning, the Chief Innovation Officer sought my input and collaboration in formulating the bigger brand story. As a result, I worked closely with other creatives within the company to develop assets that reflected the forward-facing chapter of the brand, while also paying homage to its heritage as a leading print provider.

The mark we created for Ovato was designed to reflect the company's new thinking about digital marketing and print solutions, replacing the old print, media, and marketing as standalone services. As the Chief Custodian of the brand, I was responsible for ensuring that all creative assets were aligned with the new brand direction and communicated the company's values and offerings effectively to customers.

Overall, my role in the re-branding of Ovato was to lead the creative direction of the brand, working closely with other stakeholders to ensure a cohesive and effective brand strategy.

Brand Mark

Brand Voice

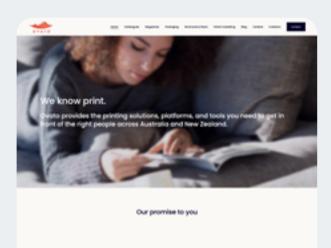

Colour Pallete

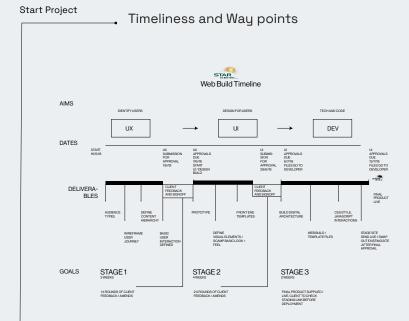

I had the opportunity to work on a lot of things at Ogilvy but one project I really enjoyed working on was for was for a client called Star Scientific. They wanted to raise their profile from respected nuclear scientists to alternative energy providers (hydrogen), and I was brought on board to help them achieve this goal.

After meeting with the clients, I began by formulating their target audiences and finding a balance between their requests and what the audience would expect. From there, I developed a wireframe and basic style guide based on their existing brand identity. I then built a bespoke website using WordPress as the CMS, using a 12-column bootstrap grid to ensure consistency across screen sizes.

The client was happy with the site and the accompanying content plan and rollout. The site and campaign targeted energy providers, federal and state politicians, and competitors in the marketplace and led to the conversations people are now having around hydrogen and the opportunities it provides for Australia

This project allowed me to showcase my expertise in website development and branding, as well as my ability to collaborate with clients and deliver results that meet their goals.

20%

increase in conversion rate and

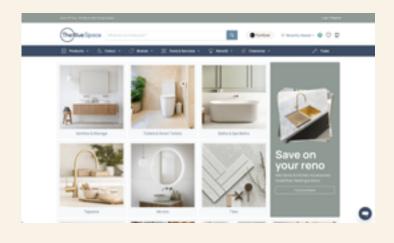

The Bluespace is Australia's premier online renovation specialists, engaging with customers primarily through their website, https://www.thebluespace.com. au. I was approached to assist in addressing bottlenecks and improving user experience issues. Initially, I focused on redesigning lower-level pages, implementing a consistent type scale and aligning user goals through color schemes and uniform button sizes. This method proved successful, leading to further requests to apply these enhancements to their homepage. Not only did this boost their average order value, but it also provided their designers with a clearer understanding of user preferences and reactions, allowing for a more cohesive and effective design approach.

I really enjoyed working on this project as there were clear metrics and goal and a high level of digital and design intergration which led to a really good outcome.

New Chimp 3

Since I've been increasingly utilizing mid journey and dalle for my conceptual development, I decided to embark on a project solely focused on concepts and AI. This required me to establish project parameters and determine the central tenets, thus birthing "New Chimp 3".

The initial concept entails a boy band with a 1990s vibe, but featuring chimpanzees instead of human members. So far, I've leveraged mid journey to create still images and chat gpt to generate names and write songs, while intending to animate them using runway. However, I'm still on the lookout for a suitable audio generator to unify the concept and bring everything together. I also want to define the origin story based loosely on the ancient greek myth of Moirai (the fates)
